

Server Colocation

DSS Infrastructure Hosting solutions provide enterprise class physical infrastructure with proven best practices for management and support. Our Server Colocation solutions allow you to own and control your systems while we provide an environment for improved availability and high performance. With access to a facility designed to efficiently handle the power and cooling requirements of your high-density equipment, you can:

- > rapidly deploy new servers and gain efficiencies without the cost of building or enhancing your facility,
- > disperse or replicate systems for business continuity purposes, and
- > have the flexibility to add managed services as you need them.

Solution Scope

- > Full rack and partial rack options
- > APC 42U locking racks
- > Redundant power to each rack
- > 24" raised floor
- > Redundant cooling
- > Redundant fire suppression
- > Facility and data center security
- > 24x7 access to your equipment
- > Basic monitoring
- > Project management and relocation planning
- > Flexible options for connectivity, advanced monitoring, storaged services, and other managed services

Colocation Benefits

- > Cost-effective access to enterprise class, redundant data center capacity
- > Improved security, availability, and performance
- > Scalability to easily expand your infrastructure as your business requires
- > Lower lifecycle costs

Supported Platforms

Windows Linux AIX/Unix

Solution Pricing

Full rack server colocation solutions start at \$2,500 per rack per month and can be customized to address your specific requirements
